DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17 and 28-31, drawn to non-natural heteropolymeric pulmonary spreading agents and compositions comprising them, classified in class 530, subclass 350.
- II. Claims 18-21 and 24-25, drawn to method of using N-substituent to enhance conformational control of a surfactant-associated protein mimic compound, classified in class 530, subclass 333 .
- III. Claims 22-23 and 26-27 drawn to a method of controlling alveolar surface activity, classified in class 514, subclass 12.

The inventions are distinct, each from the other because of the following reasons:

Invention I is related to Inventions II and III as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the spreading agent of Group I can be used in each of the processes of Groups II and III, each of which is a materially different process from the other (see below).

Inventions II and III are unrelated each to the other. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions each have different modes of operation (different starting points, method steps, and endpoints), different functions, and different effects. For example, the different functions and effects are to enhance helical conformation and solubility of a protein mimic compound in Group II and to control alveolar surface activity in Group III.

Having shown that these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter as defined by MPEP §808.02, the restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
